Details

Parsed the input files (review and metadata) from Video_Games. Joined the two files leaving an RDD to work with.

Tests for which join method was faster.

Talked with proff about algorithm to use

Worked together in lab, delegated jobs for the algorithm

Better join; preprocessed the data for review prediction

Worked on Pearsons algorithm (Pearson.scala)

Finished Pearsons algorithm, implemented MostSimilar function to use either cosine or pearsons algo and tested them (Most

Worked a bit on Metric

Finished Metric, finished implementing App to run and manually tested.

Worked on presentation: setup, data description, pearsons algo

Worked on presentation: initial parsing of data, join, added to challenges faced slides

Worked on presentation: edited bullets on pearsons slide

Compiled and analyzed data from testing 1000 lines; created and finished exec layer, predictions, and conclusions slides

Implemented cosine prediction

Worked on presentation, researched cosine/pearson similarity

Worked on project report / writeup
